B. Author-Level Descriptives

Table 2: Author-Level Descriptives by Linguistic Sphere

A. Language Profile		
	Authors (%)	Mean Papers per Author [Min, Max]
Korean only	3,073 (45.2%)	2.44 [1, 52]
English only	2,824 (41.5%)	1.59 [1, 22]
Korean + English	903 (13.3%)	9.41 [2, 86]
Total	6,800 (100%)	
B. Korean + English Authors: Papers per Author by Language (n = 903)		
	Median [Min, Max]	
Korean-language papers	4 [1, 69]	
English-language papers	2 [1, 26]	

Table 2 presents author-level descriptives by linguistic sphere. The majority of authors publish exclusively in a single language, with 45.2% writing only in Korean and 41.5% writing only in English. Authors who publish in both languages represent 13.3% of the total, though they account for a disproportionately large share of output, with a mean of 9.41 papers per author compared to 2.44 and 1.59 for Korean-only and English-only authors, respectively. Among cross-language authors, Korean-language output predominates, with a median of 4 papers per author compared to 2 for English-language papers.

C. Topic Distribution

Below are the 35 topics and their proportions used in the analysis.

Table 3: Number and Proportion of Documents per Topic: 35-Topic Model

Topic	**Topic Name**	**Written Language**		**Journal Indexing Type**		**Publisher Location**	
		English	**Korean**	**SSCI**	**KCI**	**International**	**Korean**
-1	north, political, south, policy	1,872 (39.4%)	4,106 (39.2%)	1,333 (39.0%)	4,645 (39.4%)	723 (40.8%)	5,255 (39.1%)
0	north, nuclear, south, koreas	1,611 (33.9%)	2,328 (22.2%)	1,187 (34.7%)	2,752 (23.3%)	559 (31.6%)	3,380 (25.1%)
1	asia, china, east, russia	249 (5.2%)	466 (4.4%)	124 (3.6%)	591 (5.0%)	39 (2.2%)	676 (5.0%)
2	political, democracy, trust, democratic	175 (3.7%)	470 (4.5%)	142 (4.2%)	503 (4.3%)	71 (4.0%)	574 (4.3%)
3	party, election, voters, voting	50 (1.1%)	535 (5.1%)	37 (1.1%)	548 (4.6%)	18 (1.0%)	567 (4.2%)
4	welfare, social, financial, state	181 (3.8%)	279 (2.7%)	159 (4.6%)	301 (2.5%)	110 (6.2%)	350 (2.6%)

Continued on next page

Table 3: Number and Proportion of Documents per Topic: 35-Topic Model (continued)

Topic	Topic Name	Written Language		Journal Indexing Type		Publisher Location	
		English	Korean	SSCI	KCI	International	Korean
28	intelligence, cia, failure, afghanistan	4 (0.1%)	16 (0.2%)	4 (0.1%)	16 (0.1%)	2 (0.1%)	18 (0.1%)
29	management, crisis management, crisis, disaster	5 (0.1%)	14 (0.1%)	4 (0.1%)	15 (0.1%)	3 (0.2%)	16 (0.1%)
30	multiculturalism, rights, citizenship, multicultural	3 (0.1%)	14 (0.1%)	0 (0.0%)	17 (0.1%)	0 (0.0%)	17 (0.1%)
31	financial, monetary, dollar, currency	2 (0.0%)	12 (0.1%)	0 (0.0%)	14 (0.1%)	0 (0.0%)	14 (0.1%)
32	companies, social responsibility, corporate, disclosure	7 (0.1%)	6 (0.1%)	2 (0.1%)	11 (0.1%)	0 (0.0%)	13 (0.1%)
33	dispute, wto, panel, injury	10 (0.2%)	2 (0.0%)	10 (0.3%)	2 (0.0%)	9 (0.5%)	3 (0.0%)

Topic -1 is treated as an outlier, accounting for approximately 39% of the corpus in both the original and 35-topic models, and all 5,978 documents classified as topic -1 retain this classification across both models without exception. The TF-IDF keywords associated with topic -1, including north, political, south, policy, economic, party, security, china, and international, overlap with the defining keywords of substantive topics, suggesting that these documents draw on vocabulary distributed across multiple topics rather than clustering around a single theme. This pattern is consistent across both language subcorpora, with topic -1 comprising 39.4% ($n = 1{,}872$) of the English-language subcorpus and 39.2% ($n = 4{,}106$) of the Korean-language subcorpus. The main analysis proceeds on the basis of documents assigned to substantively distinct topics.

Figure 1 displays the top 7 TF-IDF-based keywords for each of the 34 topics. These keywords distinguish each topic from others by capturing terms that are particularly salient within one topic but not across the corpus.s

Fig. 2 and Fig. 3 trace the evolution of linguistic skew over time using five-year NDS intervals based on journal indexing type and publisher location, respectively. These patterns reveal temporal change in topic distribution: a negative slope indicates that a topic is receiving increasing attention in the SSCI or internationally published sphere, whereas a positive slope indicates a growing concentration in the KCI or Korean-published sphere.

Figure 1: Top Keywords by Topic Based on TF-IDF

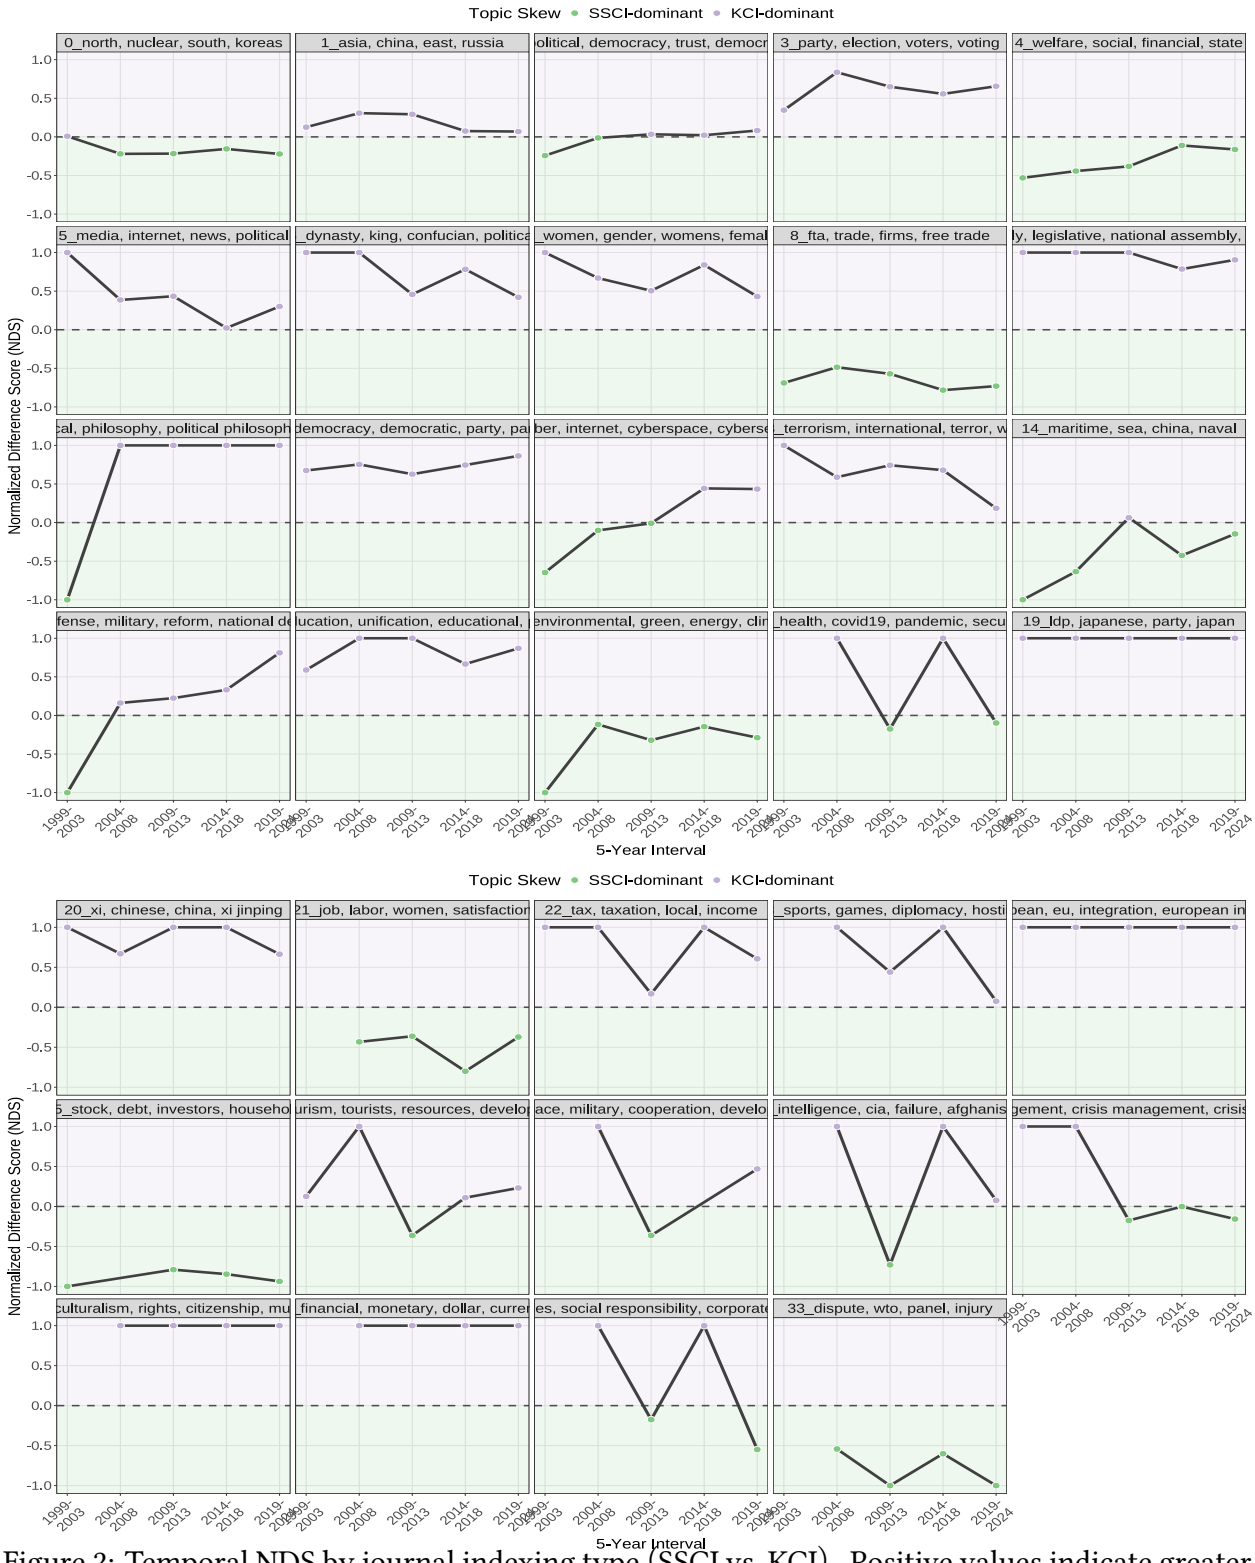

Figure 2: Temporal NDS by journal indexing type (SSCI vs. KCI). Positive values indicate greater prevalence in KCI; negative values in SSCI.

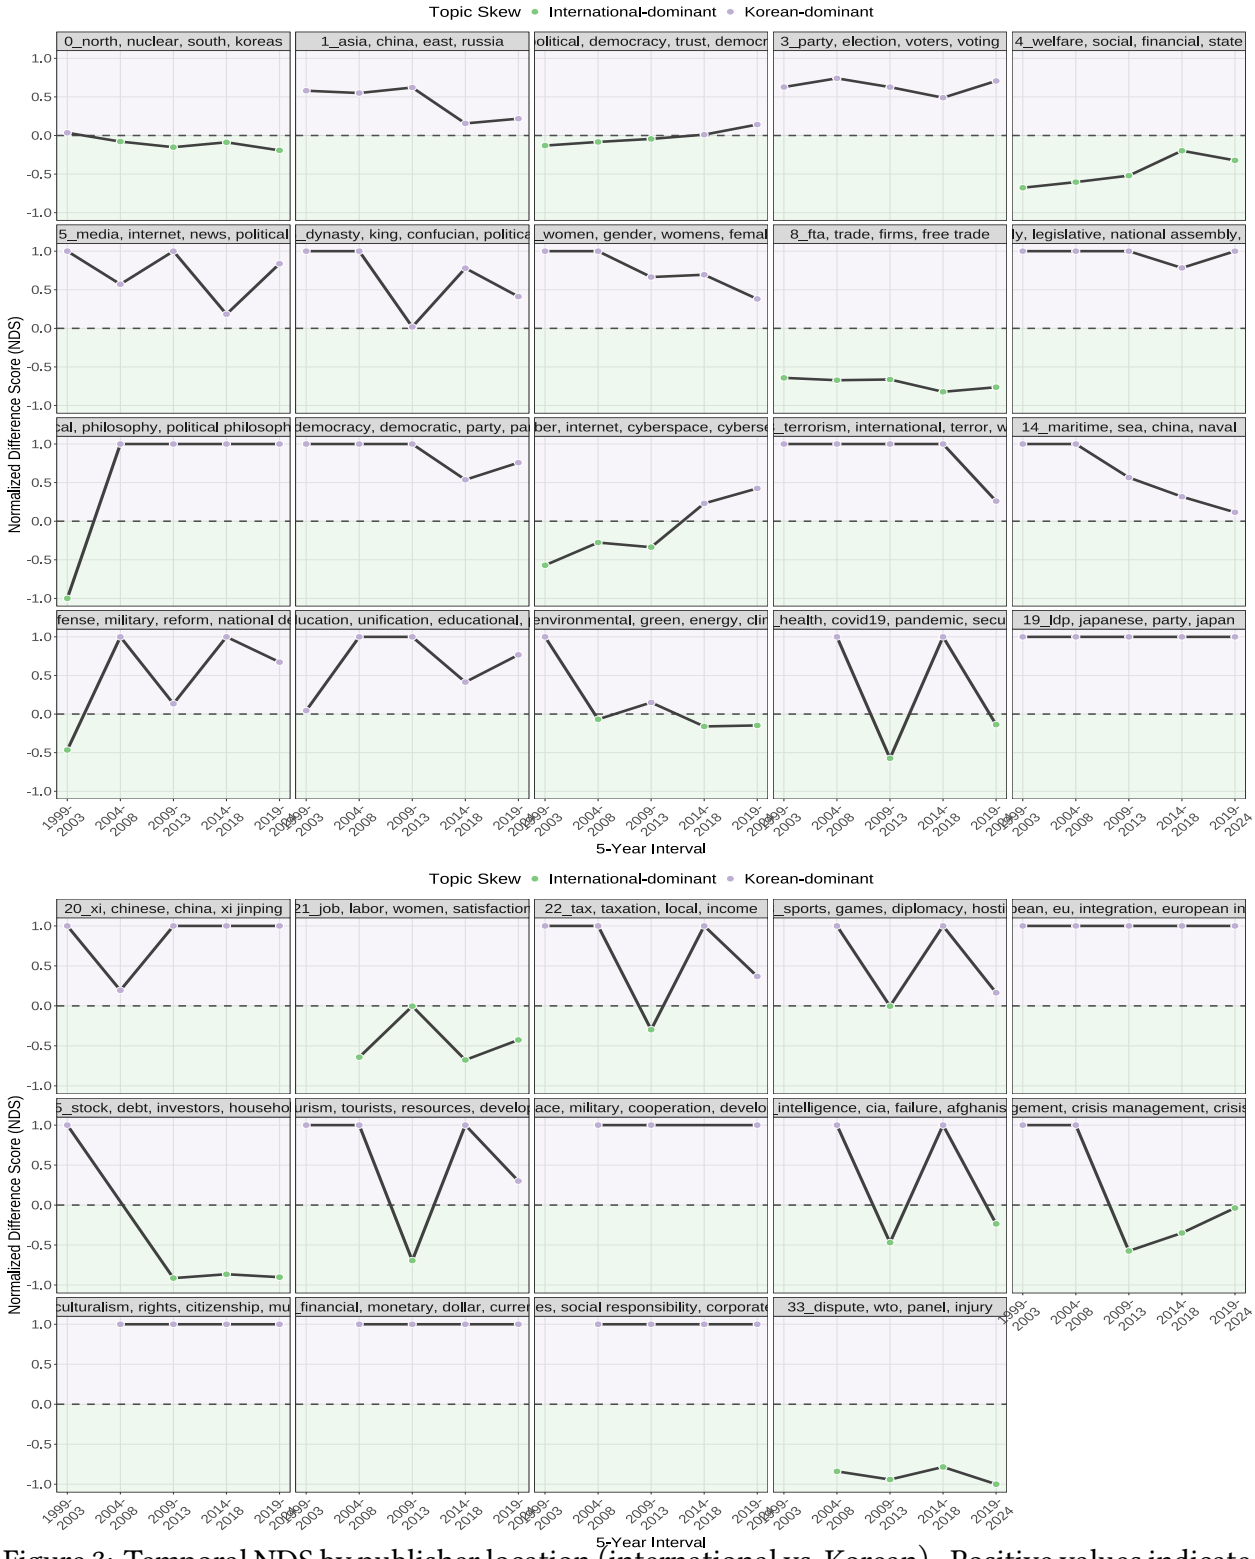

Figure 3: Temporal NDS by publisher location (international vs. Korean). Positive values indicate greater prevalence in Korean-published journals; negative values in internationally published journals.

D. Hypothesis Testing Results

Tables 4 through 6 summarize the hypothesis testing results across all three operationalizations of linguistic sphere (written language, journal indexing type, and publisher location). The results are consistent across all three dimensions.

Table 4: Mann-Whitney U Test Results: Written Language (English vs. Korean)

Hypothesis	**U**	***p*-value**	**English (mean [n])**	**Korean (mean [n])**
